SUPERALLOY STRINGS

Introduction to the **New Infeld™** **Superalloy™ Electric Strings**

For decades, Thomastik-Infeld has been the leader in orchestral string technology. This same desire to lead has been applied to design of conventional guitar and bass strings. The new Infeld Superalloy™ Strings have proven benefits in areas that really matter to players! What is the difference? They excite the senses!

Frequency Clarity: Most strings tend to have stronger performance characteristics for a few frequencies and tend to mute others. The highly magnetic nature of the Infeld™ Superalloy™ Strings, make the most of the high quality pickups on the market today. With Infeld™ Superalloy™ strings, the frequency ranges are balanced with clarity for all (even when using a wide range of effects processors). The benefits can be heard!

Smoother: The Infeld™ Superalloy™ Strings are undoubtedly the smoothest round wound string on the market today. As all players know, smoother strings equate to easier playing characteristics. This allows the novice player to become a better player faster and the accomplished player to accomplish even more. Lower coefficient of friction = Smoother, faster, more comfortable strings. The benefits can be felt!

Longer Lasting: Longer Lasting: Because of its unique alloy blend, the Infeld™ Superalloy™ String's winding process is less destructive and the materials keep more of their original form. This equals a better lasting string. Because of the smoother surface of the string and less friction on your fingers causes less debris to be deposited in the wraps. These strings are beautiful and stay beautiful. Cleaner Strings = Longer Life. The benefits can be seen!

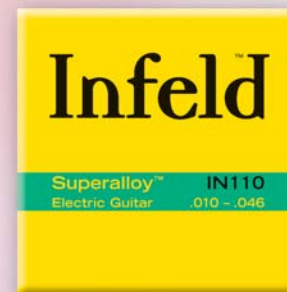

Summary: Infeld™ Superalloy™ Strings make the most out of all the components that a player uses. No matter the style. No matter the genre. Every player has an additional sense that is rarely excited. The new Infeld™ Superalloy™ Strings excite the "sixth sense" that every dedicated player has.

Infeld™ guitar strings with Superalloy™ wrap wire deliver bright, cutting tone – and they measurably produce more power than other strings. And higher gain means a better signal-to-noise ratio. Infeld™ guitar strings are also perfect for heavy effects users, or for long signal paths where drop-off could be a problem.

Infeld™ Superalloy™ bass strings are made of highest quality materials and deliver a full, well-rounded bass, throaty mids and solid treble without brittleness. Our Superalloy™ winding combined with a pure nickel layer ensures a warm vintage tone with modern definition. Plus, they are easier on your fretwork than stainless or all-steel strings.
